

Demonstration of soft stimulation treatments  
of geothermal reservoirs

Visit our Side-Event  
at the EGC 2016 in Strasbourg!

22nd September 2016

Between 13:00 and 14:00 h  
in the Luxembourg Room,  
ground floor

# DESTRESS Stakeholder Network

The joint vision for the various stimulation treatments performed within DESTRESS is to ensure minimised environmental hazard, develop innovative approaches and risk management procedures and secure broad public acceptance.

DESTRESS' technological solutions are designed to be transferable to different sites in a way that will allow the concepts to form the basis for a standardised procedure in the development of EGS projects.

To share and spread the joint vision, DESTRESS is establishing a stakeholder network to facilitate the exchange of good practices. We are seeking candidates with a strong interest in geothermal energy research, development and exploitation.

Become a part of it!

## DESTRESS Side Event at the European Geothermal Congress 2016

Visit us on 22nd September 2016 at the EGC in Strasbourg and learn more about DESTRESS and its stakeholder network! Between 13:00 and 14:00 h in the Luxembourg Room, ground floor.

### About DESTRESS

DESTRESS demonstrates methods of enhanced geothermal systems (EGS). The aim is to expand knowledge and to provide solutions for a more economical, sustainable and environmentally responsible exploitation of underground heat. EGSs allow the enormous untapped potential of geothermal energy to be put to widespread use. DESTRESS will improve the understanding of technological, business and societal opportunities and risks related to geothermal energy. Existing and new project sites have been chosen to demonstrate the DESTRESS concept.
