

Demonstration of soft stimulation treatments
of geothermal reservoirs

Join our Stakeholder Network!

DESTRESS demonstrates methods of enhanced geothermal systems (EGS). The aim is to expand knowledge and to provide solutions for a more economical, sustainable and environmentally responsible exploitation of underground heat.

This project has received funding from the European Union's
Horizon 2020 research and innovation programme
under grant agreement No. 691728

DESTRESS Stakeholder Network

The joint vision for the various stimulation treatments performed within DESTRESS is to ensure minimised environmental hazard, develop innovative approaches and risk management procedures as well as to secure broad public acceptance. To share and spread the joint vision, DESTRESS is establishing a stakeholder network to facilitate the exchange of good practices. Candidates with a strong interest in geothermal energy research, development and exploitation are invited to join.

Your interest

- Familiarity or concern with geothermal energy issues in Europe
- Link to research on geothermal energy
- Commitment to exploit DESTRESS results
- Willingness to support the vision of accelerated deployment of EGS

Our offer

- Involvement in knowledge, development and technology transfer
- Exchange of good practices
- Access to our demonstration sites and latest research
- Invitations to attend internal conferences
